

Our Reliable Technologies Meet the Needs of Customers and the Global Environment

Based on our innovative seal, specialized welding, power transmission and valve technologies, EKK group delivers product portfolio that meets the needs of customers including mechanical seals, special valves and bellows for automotive, marine, aerospace and general industries.

These environmental devices prevent oil, solvent, refrigerant and other fluids from leaking from machinery, or controls the flow and pressure of fluids to contribute to environmental and energy conservation globally.

**Energy, Oil & Gas, Steel,
Refinery/Petrochemical**

**Oil & Gas, Steel, Food &
Beverage/ Pharmaceutical,
Water, Paper**

Aerospace

**Automotive,
Construction Machinery**

Marine

Semiconductor

Surface Textured Mechanical Seal

EKK's surface texturing technology brings two contraries together: extremely low torque* with superior sealing performance*, coupled with surface speed capability in excess of 50m/s.

*90+% improvement over conventional mechanical seals
